## Farnsworth-Munsell 100 Hue Test (Colour perception testing)

Whether you work in design, pre-press, print production, or quality control, good colour vision is essential for making accurate decisions.

Printing SA makes use of the Industry Standard Farnsworth- Munsell 100 Hue Test for determining the colour discrimination and colour deficiencies of candidates. This portable, 15-minute test analyses how accurately a candidate sees colour and indicates where they have a colour vision deficiency such as colour blindness.

**NB: All learners entering into printing and packaging learning agreements with the FP&M SETA need to have their colour perception assessed.**

# COST

Farnsworth-Munsell  
100 Hue Test  
(Colour perception testing)

**R499** INCL VAT  
Members (per test)

**R599** EX VAT  
Non-Members (per test)
